

How to sync your progress and bookmarks for eBooks and eAudiobooks across multiple devices in OverDrive

With the latest version of the OverDrive app you can sync your progress and bookmarks for eBooks, audiobooks, and streaming video across multiple devices so long as you're:

1. Signed into your OverDrive account.
2. Downloaded the title(s) you'd like to sync through the OverDrive app on each device.

When you read, watch, or listen and have an active internet connection, your progress and bookmarks will automatically sync when you open or close the app so that if you read something on your phone during the day, you can pick up right where you left off on your tablet later at night.

When opening a title that you've been enjoying on another device, follow the prompts in the OverDrive app to move forward (or backward) to your last synced place.

OverDrive items are synchronized with your library account. You'll see your current progress, as well as all of your bookmarks, highlights, and notes whenever you open the item(s) you're enjoying in the app on any device with an active internet connection.
